Key Responsibilities:

- To lead the team effort in developing multimodal algorithms that can detect early signs of depression from speech and text information.
- To design, develop, and acquire voice and text corpus for early depression detection with at least 100 individual subjects.
- To lead project team in developing baseline systems and improve the system's accuracy from time to time.
- To supervise or mentor students and junior project members in supporting team to reach the project's goal.

Job Requirements:

- PhD in Computer Science/Engineering or related disciplines from a top-tier university.
- Strong analytical and programming skills and proficient in programming languages (e.g. Python, C/C++, MATLAB, etc)
- Experience in building and evaluating advanced machine learning algorithms
- Relevant knowledge and a strong background machine learning and deep learning. Experience in text processing and speech technologies, especially in depression detection and the healthcare domain is a merit.
-
