Key Responsibilities:

- Design and conduct research experiments focusing on the conversion of industrial sludge into safe, nutrient-rich agricultural products.
- Develop and optimize processes for the extraction of valuable components from industrial sludge.
- Collaborate with cross-functional teams to evaluate the agronomic effectiveness of the developed products.
- Ensure compliance with environmental regulations and standards throughout the research and development process.
- Analyze data, prepare detailed reports, and present findings to stakeholders and at relevant conferences.
- Stay abreast of industry trends, technologies, and regulations related to waste conversion and sustainable agriculture.

Job Requirements:

- Master's in Chemistry, Materials Science, Environmental Science, Agronomy, or a related field.
- Proven experience in research and development, particularly in waste conversion, hydrometallurgy, or agricultural product development.
-

Strong understanding of chemical analysis techniques and laboratory safety protocols.

- Excellent analytical, problem-solving, and project management skills.
- Ability to work collaboratively in a team environment and communicate effectively with diverse groups.
- Commitment to sustainability and environmental stewardship.

We regret that only shortlisted candidates will be notified.
