**Key Responsibilities:**

- Conduct membrane related projects for desalination, water reuse, resource recovery, etc. Specific work includes experimental setup design and construction, experiment design and testing, process modelling, data processing and reporting, progress report preparation, paper publication, assistance in research proposal preparation, etc.
- Mentor junior undergraduate students for their research projects.
- Publish research data, prepare project progress report.

**Job Requirements:**

- Bachelor's degree from a reputable university in Chemical Engineering, Environmental Engineering, Mechanical Engineering, etc.
- Relevant research experience on membrane technology and separation technologies.
- Relevant research experience on electrochemical process, electrode synthesis, etc.
- Relevant research experience on membrane module development.
- Relevant research experience in scaling up electrochemical water technology will be preferred.
- Relevant research experience in the fabrication/synthesis of RO/NF/FO/PRO/ion exchange membranes/organic solvent membranes/hydrophobic membranes, and/or organic chemical
