research staff will have the opportunity to be equipped with applied research skill sets that are relevant to industry demands while working on research projects in SIT.

The project is an oral language proficiency evaluation on primary students. Specifically, the project is to provide an automatic interface to help primary students practice and improve in their mother tongue learning.

The primary responsibility of this role is to contribute to the delivery of an interactive multilingual language learning system. The role will be part of the research and development team to implement an automatic speech evaluation application that promotes mother tongue learning for students.

Candidates should have work experience in speech recognition and language learning, and a good knowledge of general machine learning, especially neural networks. Candidates with work experience in speech recognition and language learning will be advantageous, however training will be provided.

### Key Responsibilities

- Participate in and manage the research project with Principal Investigator (PI), Co-PI and the research team members to ensure all project deliverables are met.
- Undertake these responsibilities in the project:
  1. Help in data collection.
  2. Data preprocessing
  3. Object Segmentation
  4. Image to text
  5. Text Summarization
  6. Question and Answering Tasks
  7. Machine learning model deployment
- Training will be provided.

### Job Requirements

- Good command of programming in any programming languages.
- Degree in EE, CS or related areas, preferably with good knowledge in speech recognition, natural language processing
- Good understanding and application experience of machine learning algorithms
- Familiar with speech decoding algorithms under the end-to-end framework will be advantageous.

- Familiar with one or more of the open-source tools such as Kaldi, Tensorflow, Pytorch will be advantageous.
- Experience in image processing, opencv, multimodal large language models, image to text models, speech processing and natural language processing or other related algorithms will be advantageous.

### **Key Competencies**

- Good communication skills, a team player.
- Good programming knowledge.
- Passion to work and learn independently.
- Ability to think what is best for the project, and to act upon it.
- Possess strong analytical and critical thinking skills.
- Show strong initiative and take ownership of work.
