This scholarship is part of the ATE project, which is integrated into the Recovery and Resilience Plan. It aims to develop and implement optical sensors in an industrial context for offshore applications. Various sensors will be used to monitor critical parameters for assessing water quality, focusing on measuring turbidity. This scholarship aims to research and develop an optical sensor for evaluating turbidity in marine environments.

#### **Academic Qualifications**

Master's degree in Physics Engineering or equivalent

## Minimum profile required

- Operation of optoelectronic systems.
- Microcontroller programming and software development for analysis and control.

#### Preference factors

- Practice in experimental work with optical systems, namely using fiber optics.
- Experience in 3D design for the development of prototypes.
- Knowledge of basic chemistry.

### **Application Period**

Since 26 Sep 2024 to 10 Oct 2024
