### Job Description

The Department of Civil, Construction, and Environmental Engineering (CCEE) and the College of Engineering at The University of Alabama invite applications for multiple tenure-track faculty positions at all ranks, including Assistant, Associate, and Full Professor levels, in areas related specifically to water research. Applicants applying to this particular posting should be seeking to apply for a position at the rank of Assistant Professor. Candidates with appropriate experience and a strong record of scholarly productivity and impact who would seek appointment at the rank of Associate or Full Professor are also encouraged to apply through related postings at those other positional levels.

The University of Alabama has positioned itself to be an international leader in the broad spectrum of critical water challenges and issues facing society today into the future. UA is the home to the Alabama Water Institute, the National Water Center, the Global Water Security Center, and the NOAA Cooperative Institute on Research to Operations in Hydrology. While all of these water-related institutes and research centers engage faculty from across The University of Alabama, the UA College of Engineering and its departments and faculty play a central and pivotal role in virtually all aspects of this expansive water research enterprise. As a result, there are tremendous opportunities at The University of Alabama in its various engineering departments and programs for new and established faculty members to join our constantly growing efforts in this exciting and critical area.

Of particular interest in this search are candidates with research interests in hydrology and water resources engineering relevant to civil and environmental engineering and closely aligned with the Alabama Water Institute (AWI) and the Cooperative Institute for Research to Operations in Hydrology (CIROH) (<https://ciroh.ua.edu>). To best align with CIROH and its mission, candidates should possess expertise in one of the following research themes: (1) large-scale hydrologic modeling, hydroinformatics, hydrologic information systems, artificial intelligence in hydrologic forecasting, water data science and analytics, remote sensing and water observing technologies, and applications of hydrologic forecasting in planning, design, and operations and/or (2) hydroinformatics, including advancement of geospatial data management, visualization, and analytics, web app tools, and open-source geospatial technologies for applied hydrology and water resources engineering applications.

The CCEE department and College consider teaching, research, and service as the three critical and complimentary portions of their overall mission. Candidates must demonstrate a clear potential to successfully develop, lead, mentor, and extramurally fund a highly productive research group with significant scholarly impact in a focus area with long term potential to further build upon the rapid rise and great success of the CCEE department and the College. An ability to collaborate with existing faculty in the key focus areas both within the CCEE department and the College, as well as potential

colleagues across the campus, is also highly desirable.

The department, college and university are notable for the collegial, welcoming and supportive spirit we demonstrate to our students, faculty, and staff; thus candidates must demonstrate an ability to support this aspect of our community. The CCEE department and College also pride themselves on the outstanding educational experience provided to their students, and thus faculty candidates must demonstrate an ability to develop and teach courses at both the undergraduate and graduate levels in the faculty member's area(s) of expertise as well as to teach courses that support the delivery and accreditation of the CCEE department's core degree programs.

The department offers ABET/EAC accredited Bachelor of Science degrees in civil engineering, construction engineering, architectural engineering, and environmental engineering. The department also offers six minors in the areas of architectural, civil, construction, environmental and water resources, transportation, and structural engineering. At the graduate level, the department offers the Master of Science in civil engineering, the Master of Science in environmental engineering, and Doctor of Philosophy in civil engineering. The department also supports two dual-degree graduate programs – the joint MSCE/MBA and joint MSCE/JD.

Appointments to the faculty of The University of Alabama are based on the personnel requirements of the University's academic programs and on the goal of achieving and maintaining excellence in its teaching, research, and service/academic citizenship activities.

### **EEO/AA Policy**

The University of Alabama is an Equal Employment/Equal Educational Opportunity Institution. All qualified applicants will receive consideration for employment without regard to race, color, religion, national origin, sex, sexual orientation, gender identity, gender expression, age, genetic information, disability or protected veteran status and will not be discriminated against because of their protected status. Applicants to and employees of this institution are protected under Federal law from discrimination on several bases. Follow the link below to find out more. "EEO is the Law"
