Work description

- Develop a payment chain system for paying compensation based on royalties in a data-sharing context.
- Explore methodologies for file/data comparison, using technical resources such as: Levenshtein distance, Hashing, Content Similarity Analysis Algorithms or N-gram analysis or others.
- Explore the integration of the royalty compensation component developed in connected data spaces and in the context of market and data and its effectiveness in promoting the predisposition/incentive for data owners to share data.
- Preparation of final technical report with results and analysis.

Minimum profile required

Knowledge and experience of programming in Python and JavaScript;

- Ability to work autonomously or as part of a team;
- Fluency in Portuguese or English

Preference factors

- Master's student (to be finished) or PhD;
- Experience in developing algorithms in python;
- Experience or knowledge in creating APIs, defining file bodies, headers and API tests;
- Knowledge of encryption methodologies and/or similarity analysis of file content;
- Experience in web application development;
- Fluency in English (written and spoken);
