Job Description

The Post-Doctorate Research Associate (PDRA) role is primarily focused on the independent technical delivery of and leadership in the development of projects/activities related to process optimization in metal additive manufacturing, process modeling, machine learning, and microstructure characterization. The primary responsibility of this position is to develop new scanning strategies for metal additive manufacturing. The selected candidate is expected to have experience in areas such as: AM of metals and/or other powder-based manufacturing technologies, process simulation or machine learning. The position is also expected to provide technical expertise and support to graduate and undergraduate students, assist/lead preparation of research proposals and scientific/technical papers and presentations. US citizen or permanent residence is required for this position. Please contact Dr.
